

# Fast. Easy. Accurate. Simply Superior Graphs

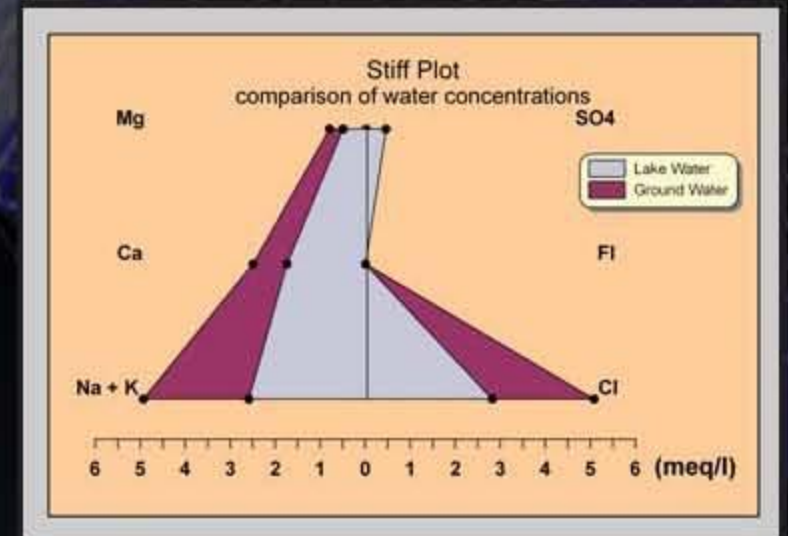

## Exciting New Features...

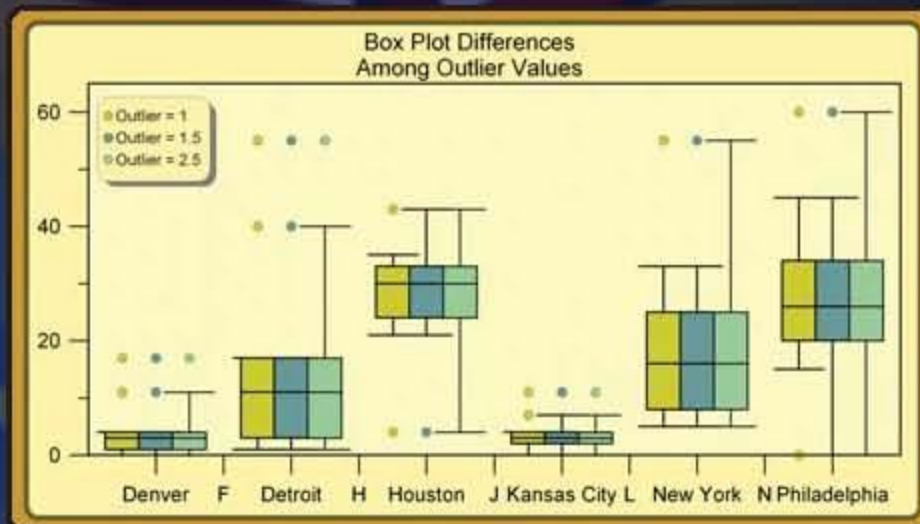

Create the graph you want! Add colors and widths for bar charts directly from the worksheet!

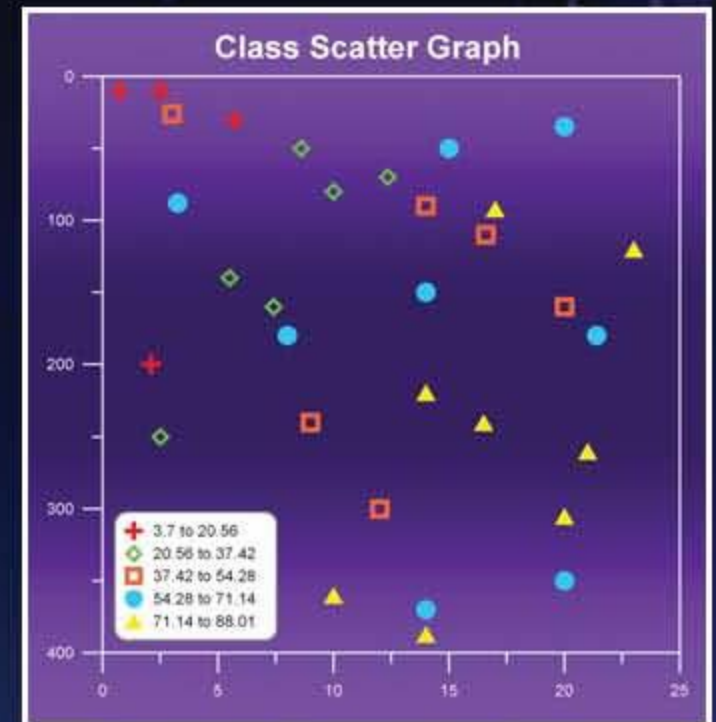

Enhance data presentation with summation plots to add additional information to your graph.

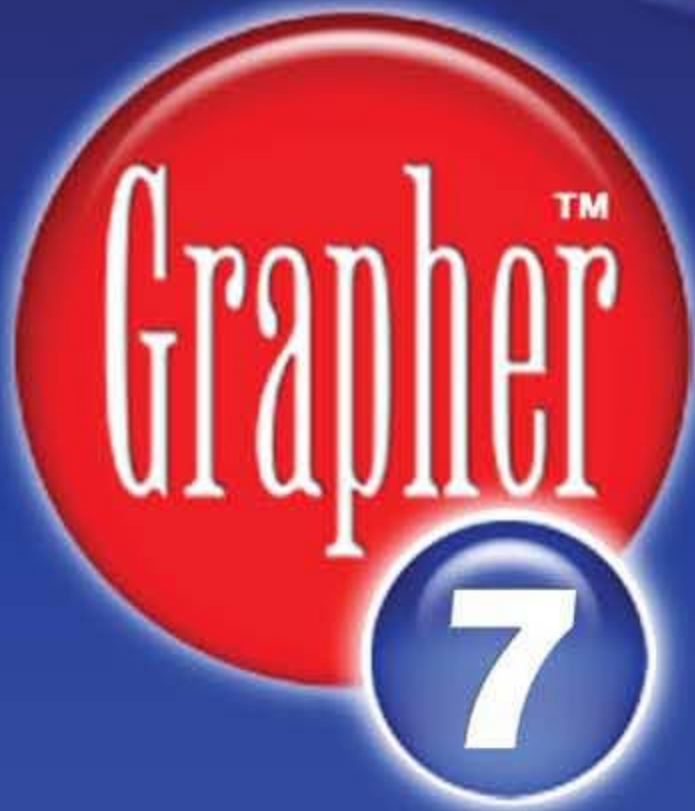

Display your data as a colorful and informative new stiff diagram!

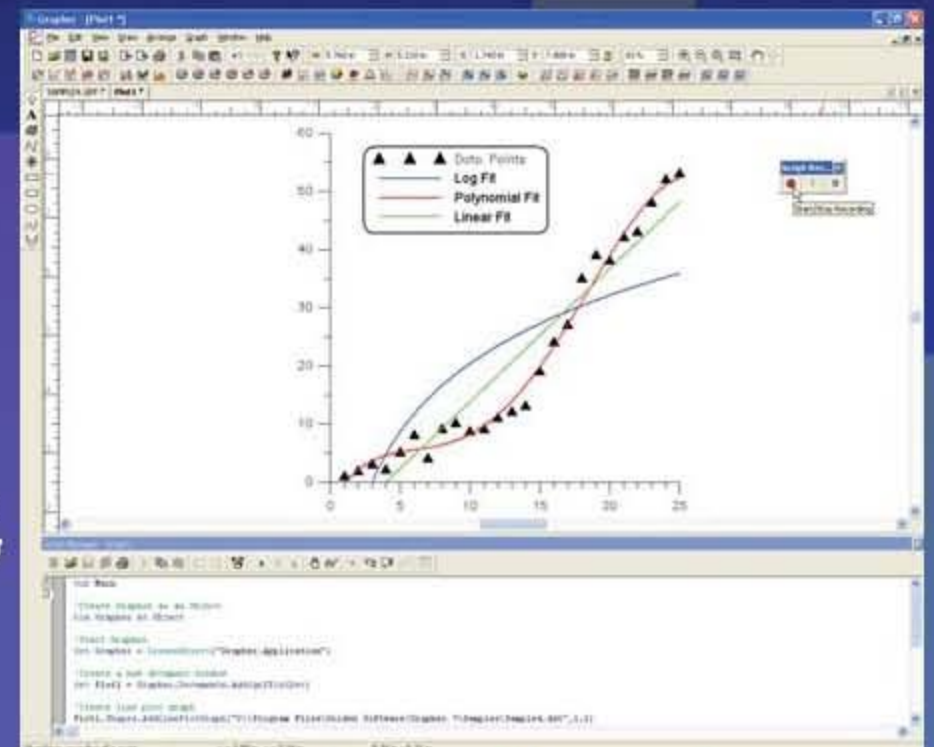

Change the outlier definition on a box-whisker plot to more accurately display the graph you want!

Another way to display multiple variable data is with a classed scatter graph! Include as many classes as you require.

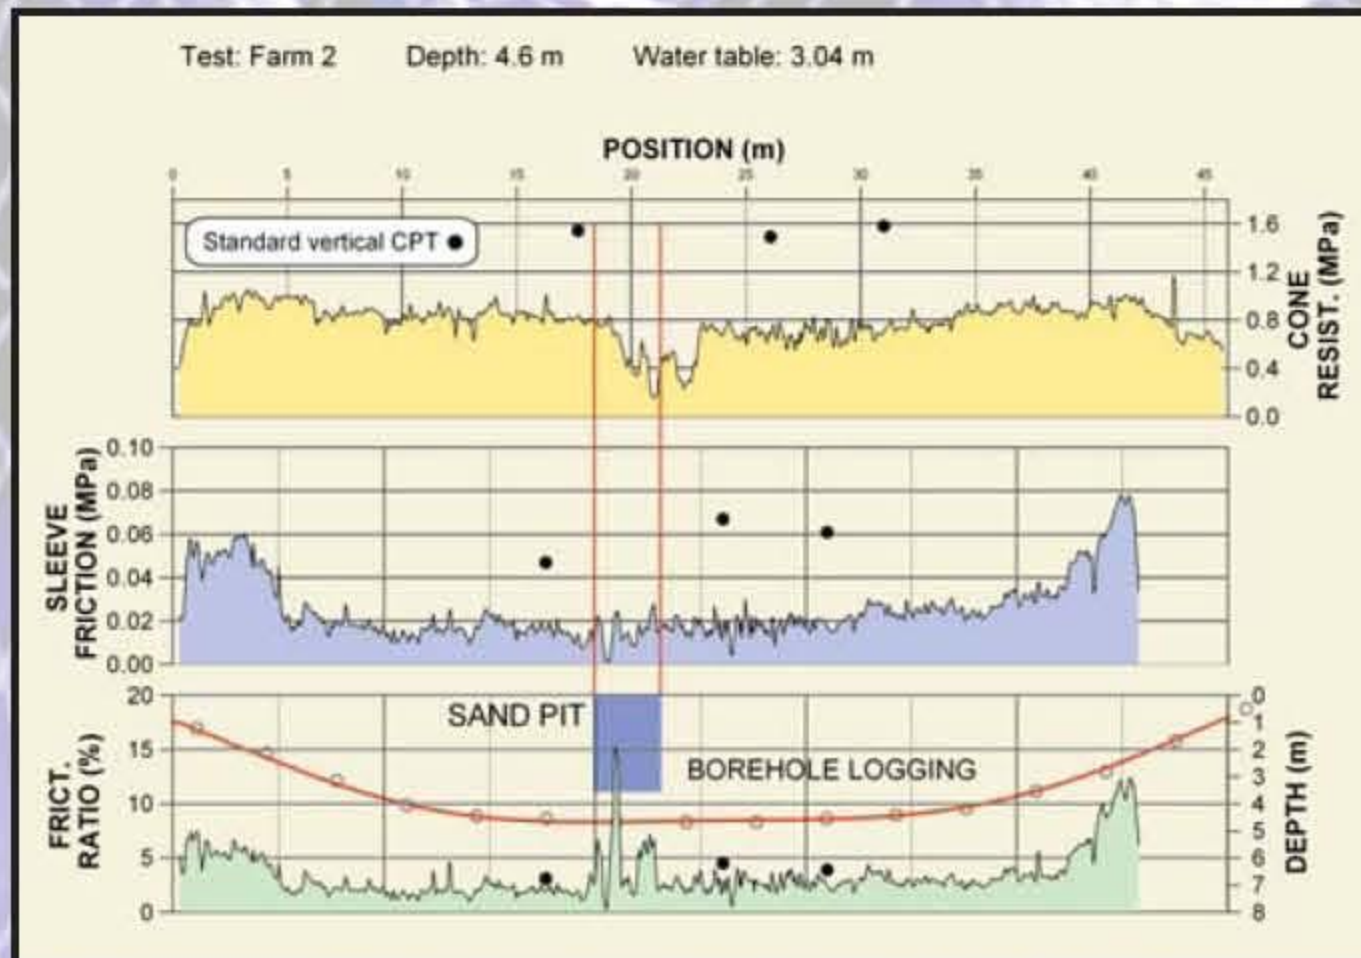

Save time and effort by automating repetitive tasks! The new script manager and script recorder allow easy and fast script creation so that similar graphs can be created effortlessly!

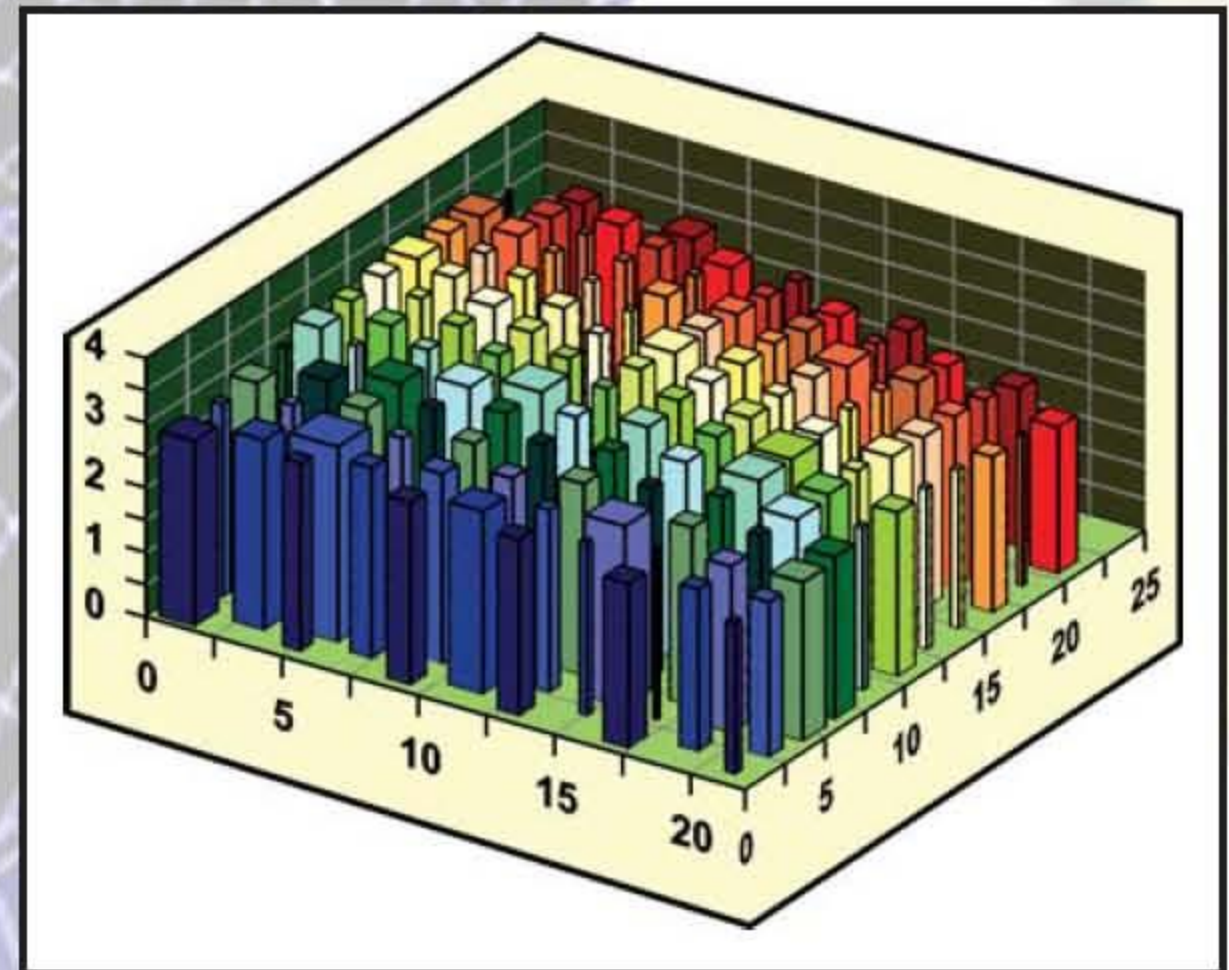

Golden Software, Inc.

# Raising the Bar!

The most sophisticated graphing package available providing professional quality graphics with versatile data handling.

Clearly display your data in any format you choose! Multiple axes and plots are easily added to a single graph to give you complete control over your graph!

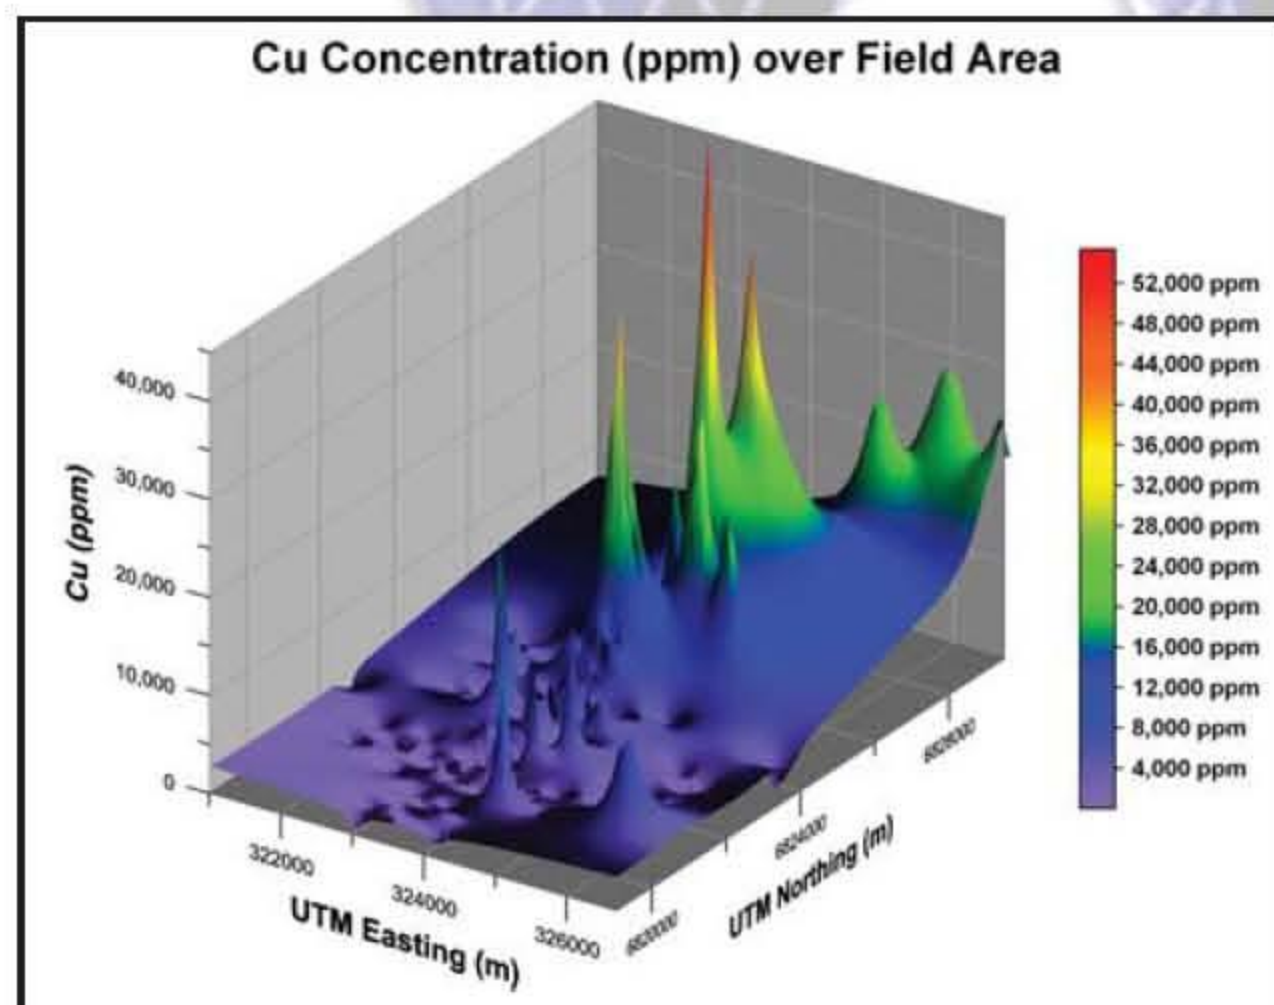

Display multiple bar charts with varying Z values using the 3D XYZ bar chart! Individually color and size each bar!

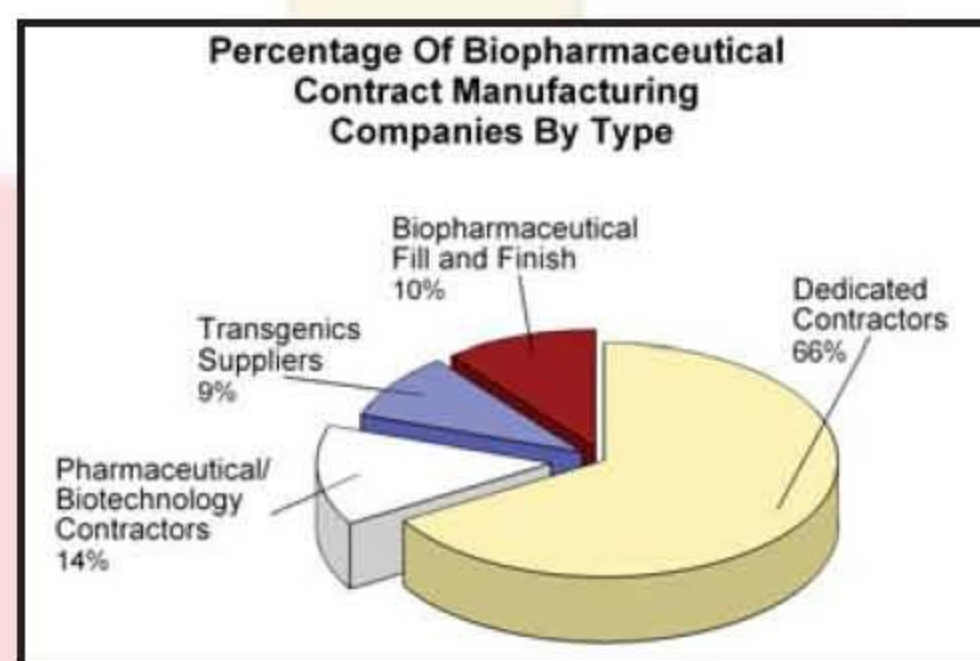

## Effortless Professional Graphs!

**Grapher 7** is the premier graphing package available! Discover how the easy-to-use, powerful, and dynamic capabilities of **Grapher 7** can help you! Easily create superior, high quality, professional graphs from the best choice available in graphing software! Using **Grapher** makes every graph impressive, every time.

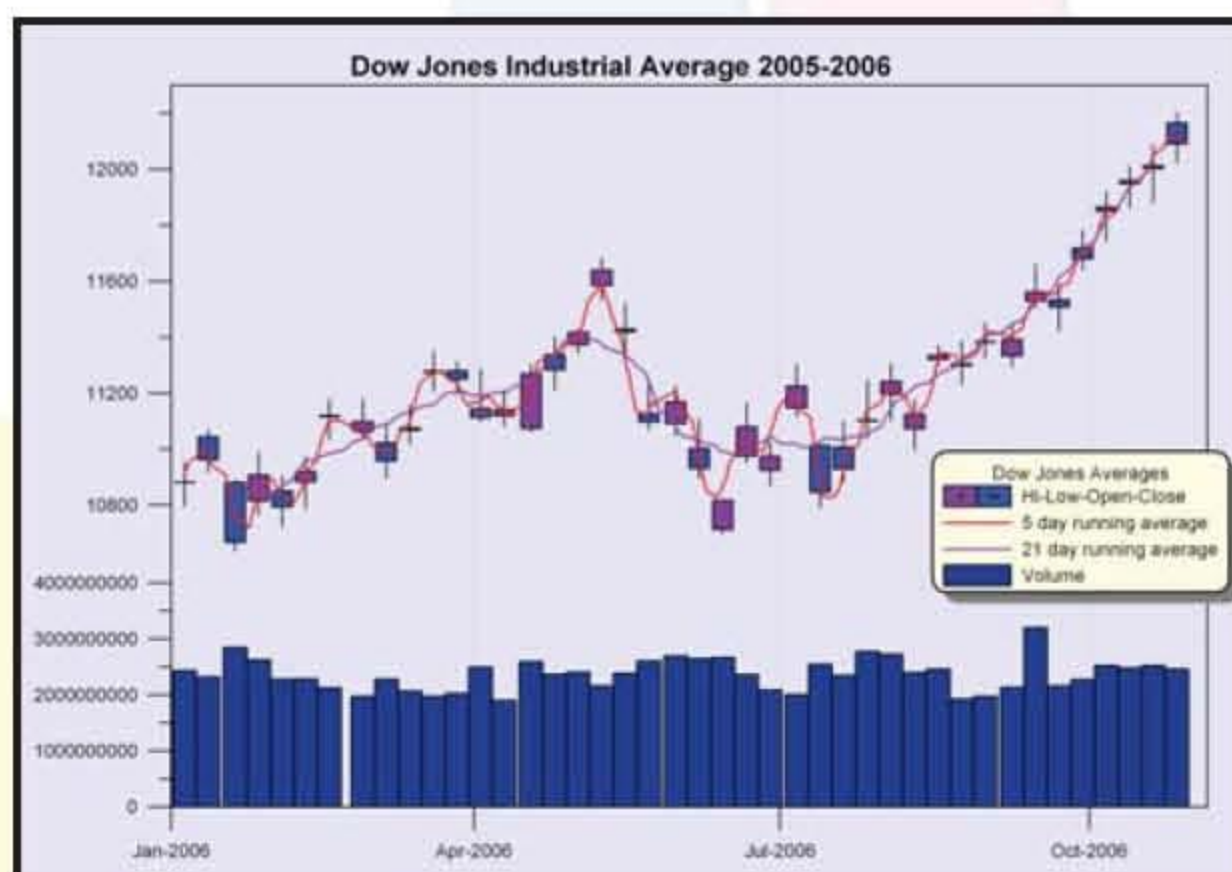

**Grapher** will help you present your graph in a clear and precise manner. Customize your graph in many ways. Add text, drawn objects, custom colors or styles, and additional supporting details like company logos to present your graph to your target audience your way. As soon as the program is out of the box, you will be creating fabulous illustrative graphics!

Use a 3D surface to display your data! Use one of the many predefined fill patterns or create your own patterns to enhance your data.

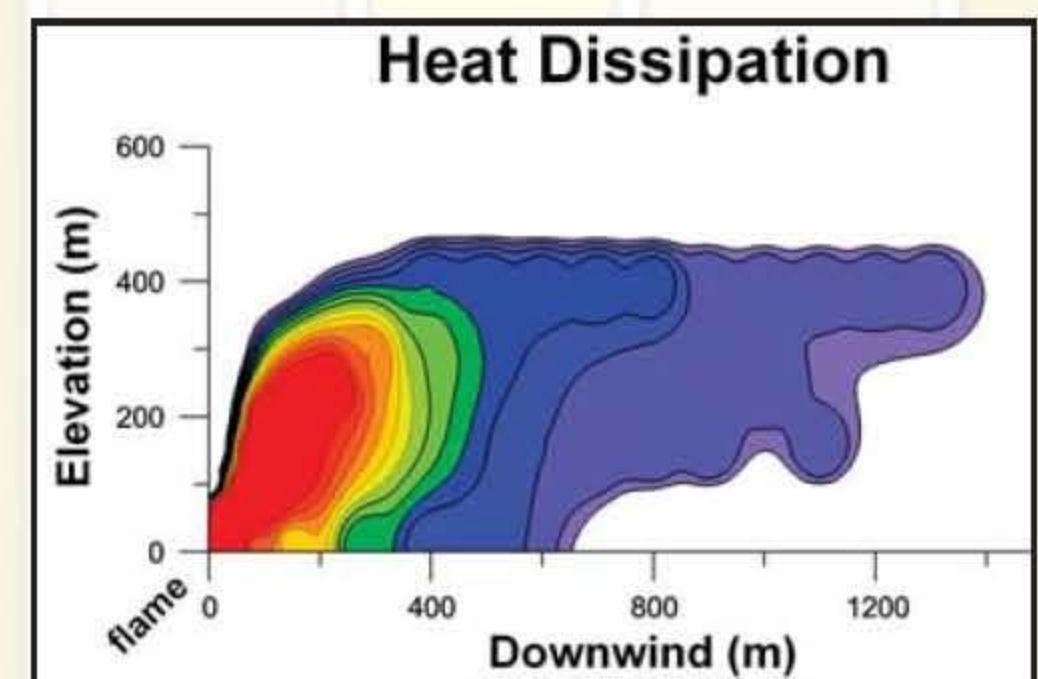

Create stunning 3D pie charts using different colors for each sector. This chart type is perfect for determining the proportion each variable has of the whole.

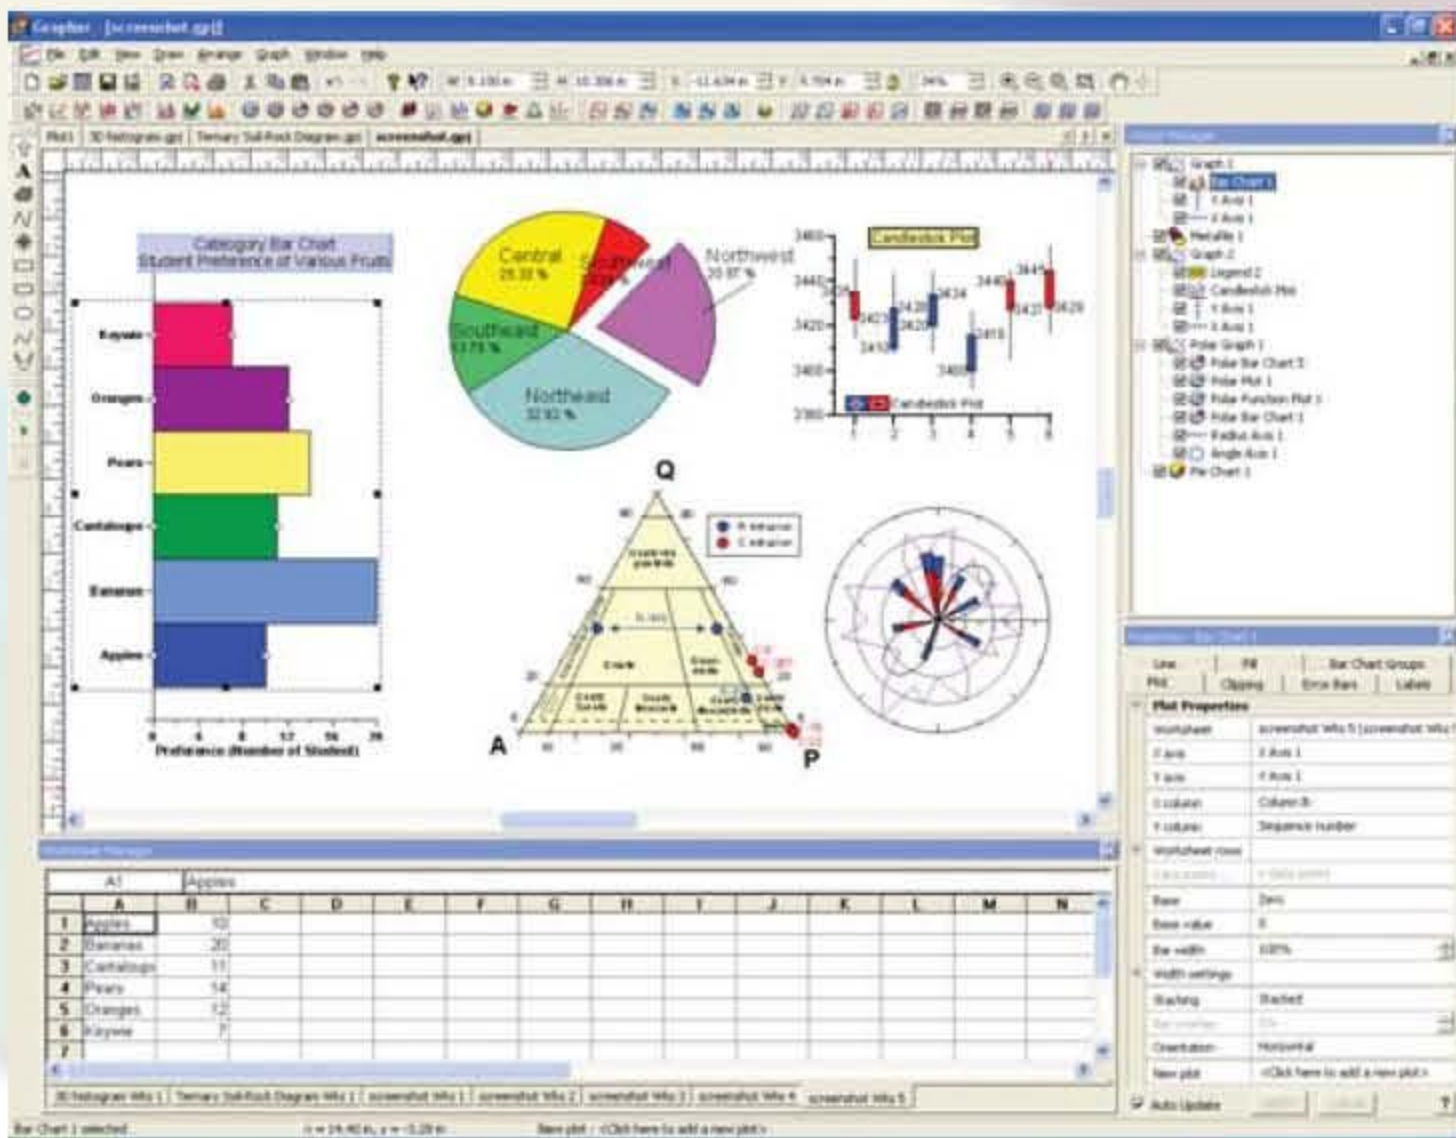

Combine multiple graph types to reveal trends in your data! **Grapher** allows you to easily stack graphs vertically to align multiple variables on the same page.

Contours provide an excellent way to show data from 3 variables. As with other graph types, contour maps can be annotated with text, axis labels, and can include any selected colors.

# Organize Your Data!

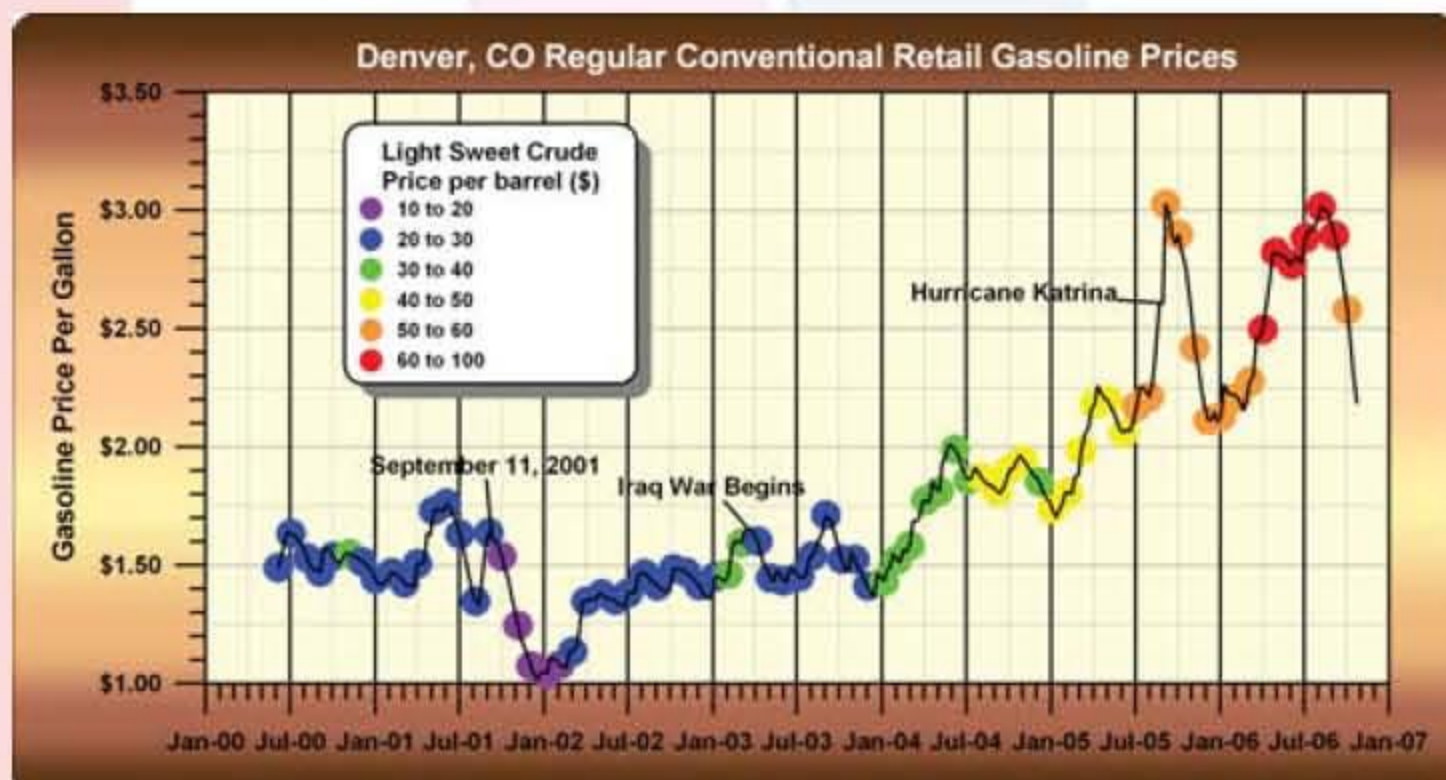

**Grapher** makes it easier to access your data than ever before! With the click of a button, you can open your data file in the Grapher worksheet or create a graph directly from your data file. Grapher supports several popular data formats, including complete compatibility with Microsoft Excel, Microsoft SLK, and ASCII text file formats. In addition, the newly available database import feature allows import from many databases, including Access, dBase, Paradox, and others.

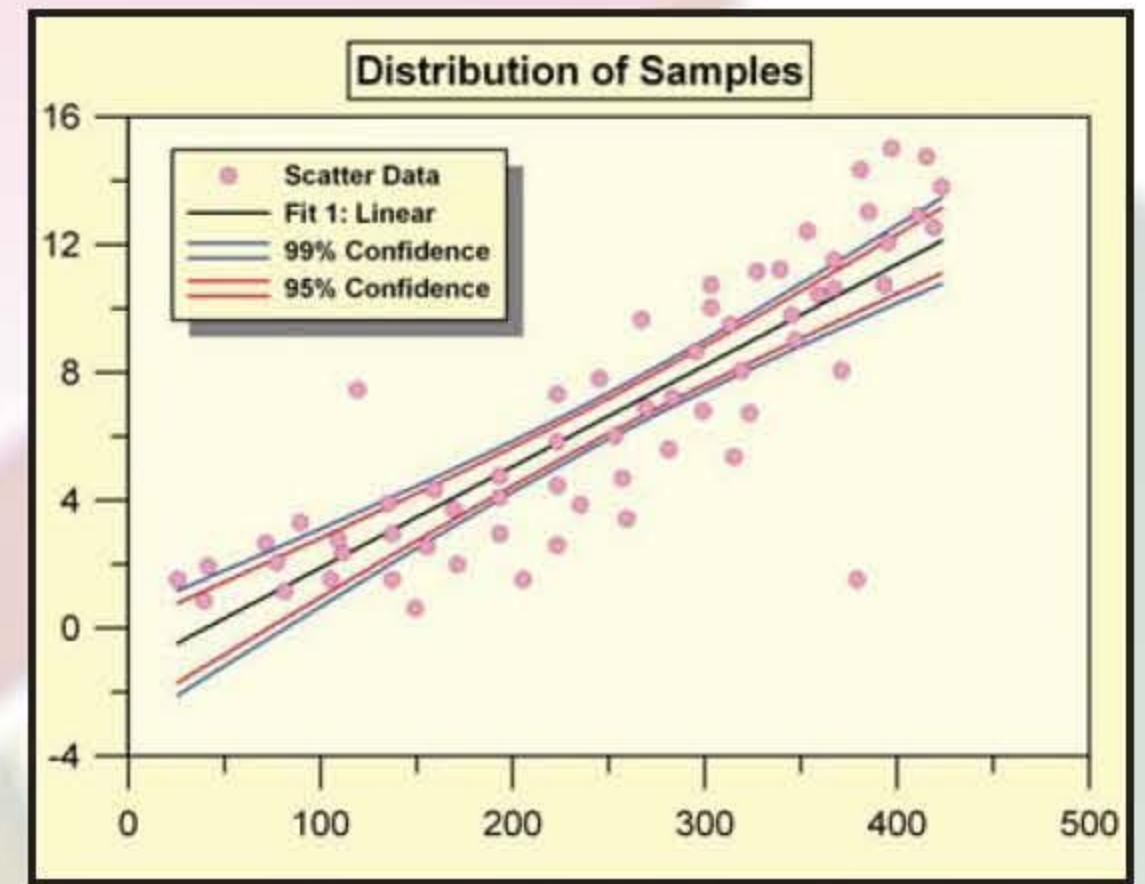

Create one of the more than 30 different graph types! Customize any portion of any graph to display and highlight only the information you want to show.

## Stunning, Simple, Stylish Customizations!

Once your default graph is created, use any of the numerous tools to increase the visual impact of your graph. Change defaults in the preference settings so that your default graph is truly yours! Add text, polygons, polylines, symbols, or images to your graph to highlight important features. With just a few clicks, every aspect of the graph can be changed to present your data in the most visually appealing format. Line properties, fill properties, format and location of plot labels and tick marks, display of error bars, fit curves, confidence intervals, titles, and legends can all be customized. In addition, you control the rows, columns, and individual data points that are on the plot.

Multiple related variables can be displayed by creating a classed scatter graph! Use any color or size combination to highlight your area of interest!

Present your data precisely using one of the many graph types, such as this line/scatter graph! Easily graph your data with fit curves and confidence intervals to reveal additional details about your data.

## Faster and Easier!

New to **Grapher**? Try the newly updated Graph Wizard to create your graphs. Choose to select only the plot type and data file and let **Grapher** do the rest! Or, add your own customizations inside the graph wizard, making it faster than ever to get the graph you need!

**Grapher's** new script recording feature makes it easier than ever to create the same graph over and over again. With the recorder, there is no need to know how to write a script. Instead, press the record button and start creating! **Grapher** does all of the script writing work for you! Prefer to have your preferences saved to a graph file instead of a script? Then using a template is just right for you! Store all of your graph preferences and customizations in a single template file! Save time, money, and energy by using the same format for every graph, every time.

## Visualize Your Graph!

Take control of your graph! With the always available Object Manager, organize your data in the form you want. Drag and drop capabilities make rearranging the order of objects simple. Add multiple plots to the same graph and add multiple graphs to the same page. **Grapher** displays the outline of the page on the screen, so you can design the layout of your graphs on the page exactly the way that you want!

Of course, **Grapher** allows you to import a variety of file formats from other programs. Import objects or maps from Golden Software's other programs: Surfer, Didger, Strater, MapViewer, and Voxler. Or, import objects from other programs. After the graph is perfect, export to a variety of formats for presentation or inclusion in other documents. Or, share graphs directly from **Grapher**!

# Don't miss out on Grapher 7's New Features!

- ✓ **Save Time and Effort with the New Script Recorder!** Scripts are no longer only for programmers! Now, everyone can use the built-in script recorder and editor to click their way to a script that will work over and over again to create stunningly beautiful graphs.
- ✓ **The Most Effective Method for Comparing Multiple Components!** When the sum of multiple lines is of primary interest, use Grapher 7! Easily see the total trend of your individual components. Apply summation line curves to display data in a combined view.
- ✓ **You Now Have Another Dimension!** Grapher 7's class scatter plots, polar class scatter plots, and XYZ class scatter plots add an extra dimension to ordinary plots, showing class relations among points anywhere on the graph.
- ✓ **You Are In Control with Changeable Outliers!** Define outliers in your box-whisker plot any way you choose. With user defined outlier factors, your box-whisker plots will show your data exactly as you want it.
- ✓ **New for Hydrologists - Stiff Plots!** Due to frequent requests, we have added stiff plots to Grapher 7. Our stiff plots are better than any other software for showing water quality data.
- ✓ **Total Database Accessibility!** Now you can easily and quickly import data from any database directly into the Grapher worksheet.
- ✓ **Quick Graphs!** Has it been a while since you last used Grapher? The new Graph Wizard will bring you up to speed in a snap. Creating graphs has never been easier.
- ✓ **Remarkable Bar Charts!** Create bar charts directly from text! Grapher 7 creates beautiful bars whether your work sheet has text classes or numeric data.
- ✓ **Let Your Data Define the Bar!** Now the width of bars can be controlled by values in your data. These dynamically sized bar charts give you more control than ever.
- ✓ **Your Complete Toolbox!** Additional drawing tools, including new spline lines and new spline polygons have been added, allowing you to create extra smooth curves and areas.
- ✓ **Most Advanced Text Editor Available!** Link any text block to a worksheet cell. Set the background fill and a background line to the text. The worksheet cell can also set the text size.
- ✓ **Switching Graph Types is a Snap!** Interactively switch graph types using the same data. Save time by not recreating a graph. Easily and quickly, compare your data plotted in 2D, then in 3D.
- ✓ **Perfect Tick Labels!** Automatically center customized tick labels between tick marks for the most customized label possible.
- ✓ **Improved Plots with Fail-Safe Labels!** Automatically plot lead lines drawn between labels and data points. If you want, easily drag your labels. The lead lines track the label to the data point, so you always know exactly what label belongs to what data point.
- ✓ **Make Your Legends Active!** Link legend entries and titles directly to the plot and graph names. If the plot name changes, the legend entry name automatically updates. In addition, change the font for all legend entries with a single command.
- ✓ **Eliminate Steps With Dynamic Fit Statistics!** Effortlessly print dynamic fit statistics on your plot. When the fit curve changes, the text is automatically updated with your new fit statistics.
- ✓ **Lost data? No Problem!** Grapher's new automatic save preserves all of your unsaved work. Save time and effort by using the new automatic save system. Grapher automatically creates a backup of any open files, and allows you to easily restore your data.
- ✓ **You Asked for It and We Responded: Relative Worksheet Paths!** Now, set a relative path for worksheets or set a single folder to contain all of your worksheet data. There is no longer the need to reassign where data is located when switching between computers.
- ✓ **Keep Better Tabs on Your Graph!** New horizontal property tabs are easier to read and make changes easier than ever! You will find these new tabs are faster and friendlier than ever before!
- ✓ **Dimensionalize Your Ternary Diagrams!** Display multidimensional bubble plots directly on your ternary diagram!
- ✓ **The Best Symbols Ever!** No longer is it necessary to use the same symbol for every point on your plot. Set customized symbols, point-by-point, in a worksheet column or in a symbol table.
- ✓ **Effortless Global Changes to Numerous Graphs!** Changing properties of multiple graphs at the same time has never been easier. Now you can even change the work sheet used by all selected plots at the same time.
- ✓ **Extreme Compatibility!** Grapher 7 allows any and every part of your plot to be exported, including the page header and footer. Import to other programs has never been more powerful.
- ✓ **Fast Graphs!** Save time by creating graphs directly from the worksheet! Creating graphs has never been quicker. Select all of the columns you want to graph and choose the graph type. Multiple curves are created automatically!
- ✓ **The Above are Only a Few of Grapher 7's Enhancements!** Upgrade your copy of Grapher today for only \$119 and discover the very best graphing software anywhere!
